

HOOD A

HOOD A is designed for the outdoor curtain detectors: **AGATE** and **AOCD-260**. The hood protects the detector from atmospheric precipitation (rain, snow) and from dirt (dust, etc.). This is particularly useful in AGATE detectors, as it significantly reduces the risk of interference with the anti-masking function. HOOD A is made of high-quality polycarbonate, which ensures high mechanical strength. Convenient and quick installation on the detector enclosure (snap catches) without using any tools.

- protection of the detector against atmospheric precipitation, dirt, etc.
- fastened with snap catches, without using any tools
- high quality material to ensure high durability
- designed for: **AGATE, AOCD-260**
