

The MCT84M series readers are indoor RFID access terminals dedicated for RACS 5 access control system. Readers need to be connected to a host device, which usually is an access controller, and can't operate autonomously. The MCT84M terminal can read either factory programmed card serial number (CSN) or any user card number (PCN) programmed in encrypted data blocks or files on a card. Because the CSN card numbers are not encrypted and can be duplicated the PCN numbers should be used for access control systems in general. Communication with controller is achieved through RS485 bus which can utilize free topology (e.g. three,

star and combination of them) and any type of signal cables. The maximal distance between controller and reader is limited to 1200 m of cable run. Configuration of the reader as well as firmware upgrade is made through RS485 and require RogerVDM (Windows) program. The front panel of the reader is made from the glass, which guarantees high durability and elegant aesthetics. The neutral shape of enclosure matches various styles of interiors including traditional, modern or even historical ones. Because of its narrow shape the MCT84M can be installed on door frame and other door construction elements with limited space.

**Features:**

- authentication by Card and/or PIN
- MIFARE® Ultralight/Classic card reader
- support for normal and long card reading method
- RS485 communication interface
- 2 function keys
- tamper contact
- indoor environment
- 12 VDC power supply
- CE mark

Ordering guide	
<i>Item</i>	<i>Description</i>
<b>MCT84M</b>	MIFARE Classic access terminal with keypad
<b>MCT84M-BK</b>	MIFARE Classic access terminal
<b>MCT84M-W</b>	MIFARE Classic access terminal with keypad; white colour Offered as a product in special version
<b>MCT84M-BK-W</b>	MIFARE Classic access terminal; white colour Offered as a product in special version
